About Abacus

Abacus is a leading provider of pharmacy management systems to independent, chain, outpatient, institutional, mail order pharmacies and dispensing physician office. Abacus has been in business for over 20 years and has thousands of users already trained on the system. We pride ourselves on ingenuity, innovation, and premium quality. After all, we

have high standards to live up to; We are dedicated to breaking new ground in the healthcare industry and providing our customers with the very best in quality, customer service, and value.

Retail Pharmacy Software

The Abacus Pharmacy System is an integrated prescription processing environment that provides today's pharmacies with all of the software tools necessary to handle the complexities of modern prescription processing.

✓ [Highly Centralized Prescription Processing](#)

Prescription processing is highly centralized. It is designed primarily around the prescription fill screen. Functions such as filling prescriptions, adding patients and doctors, transmitting online claims, performing proactive DUR analysis, maintaining SIGs, and printing patient education leaflets can all be done while filling a prescription. This centralized design greatly improves the user's productivity by providing direct access to the majority of the tasks associated with prescription processing from a single location. The remaining tasks such as database maintenance, billing, system administration, reports, accounts receivable, nursing home support, are all organized within the system.

The screenshot displays the 'Pharmacy Plus, Version 1.0.523' application window. The title bar indicates the location as 'Miami, Terminal: ORLANDO-LAPTOP'. The interface includes a menu bar (File, Prescriptions, Reports, Tools, Archive, Pick up, Window, Help) and a toolbar with icons for various functions like RX, Patient, Physician, Item, Plan, Quote, Sign On, Search, Report, Inventory, Cycle Fill, Orders, CK Drug, Delivery, Payment, Recycle, To Do, Queue, Refills, and History.

The main window is titled 'New/Refill Prescription -- SMITH, ALAN (ID:8315)'. It contains several sections for data entry:

- Patient:** SMITH, ALAN H. (with a search icon)
- Prescriber:** TUCKLER, AARON (with a search icon)
- Item:** PAXIL 20MG TABLET/NDC=29 (with a search icon and a 'Substitute' button)
- Quantity:** Written: 30, Dispense: 30, Refills: 3, Quantity Remaining: 90
- Sig:** TAD (with a search icon), Days: 30, DAW: 0 - No Product Selection Index
- Instruction:** TAKE AS DIRECTED.
- Plan:** PCS - CAREMARK SUF, Price: 141.59, CoPay: 0.00
- Origin:** 1-Written, Delivery Type: (dropdown), HOA: (dropdown), NH #: ALZRm, #: 3w303
- Rx Number:** 409071 (with a search icon)
- Date:** Written: 6/4/2007, Dispensed: 7/10/2007, Discard: 07/09/2008, Rx Expire: 6/3/2008
- Lot #:** (empty field)

On the right side, there is a 'Picture of PAXIL 20MG TAB...' window showing two pink, oval-shaped tablets with 'PAXIL' and '20' embossed on them. Below the picture are buttons: 'Show larger picture', 'Remove this picture', and 'Scan a prescription'.

At the bottom, there is a table with columns: Plan, NDC, Item, Rx Number, Ref#, Refills, Quantity, Days, Total, Status. Below the table are buttons: QTC/Service, DME, Scan prescription, Save, Clear All, Implode.

The status bar at the very bottom shows: F1-Help F2-Plan F3-Del F4-Patient F5-History F6-Refill F7-Sub F8-Next Page F9-DME F10-Save F11-OTC RPH: ABA Tech: ABA

✓ [Order Entry and Processing](#)

Meet the needs of your high-volume retail or long-term care pharmacy with the comprehensive tools included in our system. Prescription are scanned and entered into the orders entry queue, where they are later retrieved at the dispensing station.

Email: Juan@abacusrx.com

✓ [Workflow](#)

Improve patient safety and pharmacy resource utilization. **Eliminate dispensing errors by verifying prescriptions** during the filling process to assure that the drug product identified on the label is the drug product that is being dispensed. The dispensing process includes order entry, pharmacist verification, labeling/ packaging, quality assurance with NDC bar code verification and drug images, and delivery with bar code tote checking. Orders that require additional attention can be pushed to the error resolution queue to avoid delay.

✓ [Queue](#)

The system maintains Workflow queues on Orders, holds, physician action, DUR, rejects and verification.

✓ [Document Imaging](#)

Transition to a paperless environment. Scan, store, and retrieve any type of document (including: CMN, prescription, insurance card, physician documentation, worker comp, etc ..) to eliminate the need for manual filing. The prescription, insurance card and signature is scanned and attached to the patient record. When patient information is retrieved, the images will automatically appear as verification of the patient's prescription. In addition to helping to prevent dispensing errors, the module can help dramatically reduce the time and expense of an audit.

✓ [Pill Database](#)

With thousands of drugs in different shapes, sizes and colors on hand in a pharmacy, the pill database is of tremendous value. It retrieves an image of the prescribed pill with the prescription image, aiding in verification.

✓ [Inventory Control](#)

Perpetual inventory control system monitors and updates your inventory in real-time.

✓ [Patient Counseling \(OBRA\)](#)

The system provides patient counseling support in the form of patient education leaflets. In addition to a full complement of drug utilization review (DUR) checks, like Drug Allergy, Drug-Drug Interaction, Drug Contraindication, Side Effects, Duplicate Therapy, Dosage Range, Duration of Therapy, Pediatric Contraindication, Geriatric Contraindication, Pregnancy Contraindication and Lactation Contraindication.

✓ [Purchase Orders](#)

Automatically create purchase orders with recommended quantities when current inventory falls below pre-set minimum levels, create your own custom purchase orders or create a purchase order based on sales in a specific date range.

✓ [Flexible pricing](#)

Unlimited pricing strategies based on payment plan, formula in pricing tables, drug, quantity, level, category, group or form.

✓ [Accounts Receivable](#)

Patient or carrier enjoy comprehensive financial data management with easy posting, reporting and tracking of private pay and facility charges with a variety of accounts receivable reports. Easily process statements, trial balances and departmental reports with electronic claims reconciliation. Easily view patient and insurance carrier balances, send statements, and print detailed accounts receivable aging reports by

✓ [Third-party billing](#)

Fast automatic internet electronic claims to multiple payers. You can bill Medicaid, Third party, Medicare part D, Workers compensation and Medicare part B (DME) direct or by paper billing.

✓ [Electronic claim reconciliation via 835](#)

Reconcile third party payments fast, electronically or manually. Claims reconciliation allows you to easily post claims processor remittance data to the system. Claims billed both online and offline are posted to the tracking system. The tracking system provides you with a highly functional maintenance interface. Using the interface, you are able to filter the billed claims by specific date ranges for both individual plans and all plans. Sort the claims by billed or fill date. Search for individual records by prescription number. In addition to these filtering capabilities, the tracking system interface also provides on-screen editing of claim entries, reporting, and reject re-billing.

✓ [Compounding](#)

Fill your compounded prescriptions and track what was prescribed and dispensed. You can track the specific batch (lot number) dispensed to each patient or place Rx's on hold, generate a partial fill, transfers, Rx notes, controlled substance reporting, price quotes and refill reminders. Add your own formulas or copy from other formulas already on file. Each formula may have an unlimited number of chemicals and instructions. The system automatically calculates the cost of each ingredient as they are entered.

✓ [Cycle filling](#)

Our Cycle Fill and Mass Fill functions automatic refill and provides the ability to send multiple claims for multiple patients to multiple carriers for routine medications. These functions save you time and money by allowing you to refill like the real world. You can refill in batch or by MAR. MAR gives you the flexibility of not only refilling routine medications like other less capable systems, but allowing you the flexibility to select non routine medications, to discontinue medications or fill new medications from the MAR Sheet, once you are satisfy with all the changes, the system will automatically refill, transmit, print the prescriptions, MAR Sheet and Delivery Sheet for all selected medications.

✓ [Text/Email Notifications](#)

The text message & email feature allows you to notify your patients when their prescription is ready to be picked up!

✓ [Multi-lingual](#)

Multi-lingual drug information and SIG with custom multi language SIG printing.

✓ [High Volume Pharmacy Management](#)

System customizable for different operational environment needs. Screen expands to additional options for high volume operation. Whether you fill 15 prescriptions a day or 15,000 prescriptions a day, the software handles it with ease.

✓ [Complete set of Analysis Tools and Reports](#)

The Abacus Pharmacy Plus system provides you with a wide range of reports and analysis tools. Several reports are available in each of the following areas - SIG, patient, drug, doctor, third plan, price, counseling, sales, refills due, and delivery. In addition to these reports and 100 other reports, the system provides a detailed daily prescription processing log.

✓ [Easy to Learn and Use](#)

Complete tasks easily with basic computer knowledge. We also provide free training, live customer support and as access to our video/manual training library.

Optional Products and Modules

Tailor your system to meet your pharmacy needs with a variety of integrated products and modules like:

- Nursing Home module.
- DME Medicare part B billing.
- Delivery System on iOS (iPad, iPhone, iTouch).
- IVR (Interactive Voice Recognition).
- Electronic Prescribing.
- Robotic interface (RDS).
- Electronic Signature Capture via Topaz signature pad.
- Electronic Signature Capture via iOS (iPad, iPhone, iTouch).

Point-of-Sale

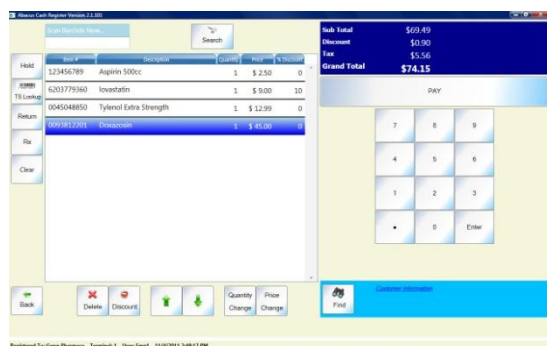

The POS system for pharmacies provides interfaces in real-time to pharmacy software. As your prescriptions are filled by the pharmacy system, your point of sale is instantly updated with the Rx number, co-pay, patient name, etc. Your customer picks up the prescriptions and any OTC's which are then scanned through the point of sale, once the sale is complete, the prescription software is updated and a message is also sent back to your pharmacy system that the item has been picked up. You can also get a report of all outstanding unpaid prescriptions alphabetically which will allow you to audit your will call.

The Abacus POS system is designed to automate the process of selling pseudoephedrine-based medicines like Sudafed and Claritin D, which are regulated by federal and state anti-meth laws. It offers an up-to-date compliance assessment to ensure your pharmacy is recording all data required by your state, while also providing a faster, easier sales transaction for your customers.

The POS software gathers signatures for both Rx signature logs and the HIPAA Notice of Privacy Policy (NOPP) and integrates this with your POS system for easy reference, reporting, and auditing.

Basic POS features:

- Pharmacy software integration
- IIAS Compliancy
- SIGIS Eligible List
- Touch screen
- Auto Purchasing
- Inventory Control
- Customer Management
- Frequent Shopper
- Integrated E-commerce
- Credit Card Processing
- E-signature Capture for HIPAA, RX Log, Credit Card
